

OnCore Enterprise is a clinical trials management system (CTMS) that provides centralized protocol tracking from start up to close out and more accurate capture and reporting of study-related information.

### **OnCore CTMS Benefits**

- OnCore streamlines the workflows of clinical trials, including protocol, subject, regulatory, and financial processes.
- An interface to Impact allows for the transmission of study and patient data to PowerTrials.
- OnCore improves communication and efficiencies between study staff and external entities.
- OnCore provides access to a robust community that discusses clinical trial operations and shares best practices.

### **OnCore Financials Benefits**

- Study financial management is fully integrated with the study administration and clinical data management components of the OnCore Enterprise CTMS.
- OnCore provides a tool for appropriate and consistent budgeting through the creation of protocol calendars linked to charge master events.
- OnCore increases the capability to provide meaningful reports and data regarding the financial status of studies; improved ability to invoice sponsors and to track and invoice milestones more efficiently.
- OnCore improves billing compliance using detailed study calendars and communicating procedures to UAB billing departments.

### **Questions?**
