

The Southeast Health Alliance for Research (SHARe)

What is SHARe?

A new 12-member consortium launched by the CCTS to build on the strengths of our Partner Network to develop a truly transformational research enterprise in multisite studies for the Deep South.

Why Use SHARe?

- Multisite studies and clinical trials require a high degree of coordination among study sites. With its agreed upon standard operating procedures to guide every step of the multisite research process, SHARe reduces the redundancies and eases the administrative burdens that slow typical time-to-activation.
- Multisite studies and clinical trials frequently struggle to identify and enroll sufficient numbers of qualified participants for clinical research protocols. SHARe offers access to a large, regional, and diverse population. Whether you are studying a rare or chronic disease, looking for a genetic anomaly, or testing the effects of an intervention or treatment by gender, age, race/ethnicity, socioeconomic status, or geographic location, the SHARe network can help you find a cohort that meets your criteria.
- Adequate research funding is challenging and growing more so every day—institutions that participate in SHARe can gain a valuable edge in competing for multisite trial research support.
- Multisite studies and clinical trials that participate in SHARe can help spur trans-network innovation among faculty, physicians, and other health care providers, resulting in discoveries that can rapidly improve health care and, ultimately, benefit communities across the Deep South.

How Do I Propose a Study to SHARe?

Principal investigators from any SHARe institution who are interested in proposing a study should contact Frannie Horn at fhorn@uab.edu for more information.
