

UAB Center for AIDS Research (CFAR)

At the nexus of HIV research since 1988

The UAB CFAR cores provide an exceptionally cost-effective mechanism for supporting and stimulating cutting-edge HIV research that is available to researchers at UAB and external collaborating institutions.

Our center structure features 5 Cores that provide services, scientific working groups dedicated to catalyzing new science, and our shared values. We are committed to having the priorities of people affected by HIV as a cornerstone to our work and having them reflected in our mission, our community engagement and forging genuine partnerships.

Explore our scientific services, opportunities for pilot funding, and upcoming seminars and training events by visiting our website and joining our Listserv.
