

Steps to Clean a Syringe

Instruments used during an experiment with pyrophoric chemicals have to be cleaned in a certain order.

Please follow the steps below.

1. Make sure the syringe is quenched before washing or disposing.
2. Rinse the syringe and the needle with a non-reacting solvent by drawing solvent into the syringe.
3. Repeat Step Two, three more times.
4. Rinse the syringe again with alcohol two more times.
5. Clean both the syringe and needle with water.
6. Discard wash solvents as hazardous waste.
