

Memo

To: CT and MRI Technologists
From: Dr. Samuel Galgano, Vice Chair of Quality and Patient Experience
Date: January 10, 2023
Re: Contrast Coverage

One of the Radiology department's goals is to ensure that the patients that have a contrast-induced reaction are doing well and not experiencing symptoms progressing to anaphylaxis. In emergency cases such as these, it is not important to try and retrieve the Radiologist of the region of the body that is being scanned, but instead to get the closest available radiologist. Therefore, below defines what sections will be primarily responsible for contrast coverage by locations and modalities.

- A. North Pavilion
 - a. Chest 7:30 AM – 5:00 PM
 - b. Abdomen 7:30 AM – 5:00 PM

- B. TKC MRI
 - a. Neuro 8:00 AM – 5:00 PM (primary)
 - b. MSK (backup)

- C. TKC CT
 - a. Chest 8:00 AM – 12:30 PM
 - b. MSK 12:30 PM – 5:00 PM

- D. TKC MRI/CT
 - a. On call Resident (Before 8:00 located in TKC GI reading room, after 5:00 PM located in the MRI Neuro RR)

Any concerns should be communicated to Dr. Galgano and Ashley Thomas.

Sam Galgano, MD | Associate Professor, Vice Chair of Quality and Patient Experience
Section Chief, Abdominal Imaging
University of Alabama at Birmingham
Department of Radiology
