

THE UNIVERSITY OF
ALABAMA AT BIRMINGHAM

Knowledge that will change your world

Working with metabolomics data

Steve Barnes, PhD

Examining output on XCMS

- **First, we'll logon to XCMS and inspect the non-irradiated diet vs irradiated diet**
- **We'll download the XCMS output file**
 - Make a Volcano plot
 - Prepare files for MetaboAnalyst

Datasets Used

- Grubbs_NonIrrad (108897) *
- Grubbs_IrradIat (108890)

Total ion chromatograms

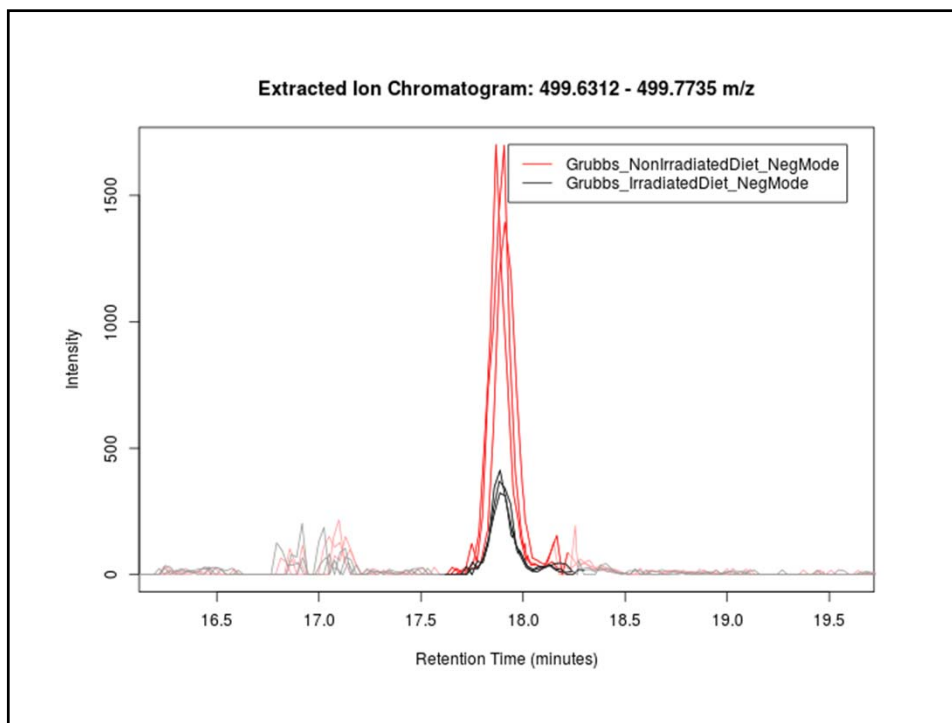

High reproducibility of retention times

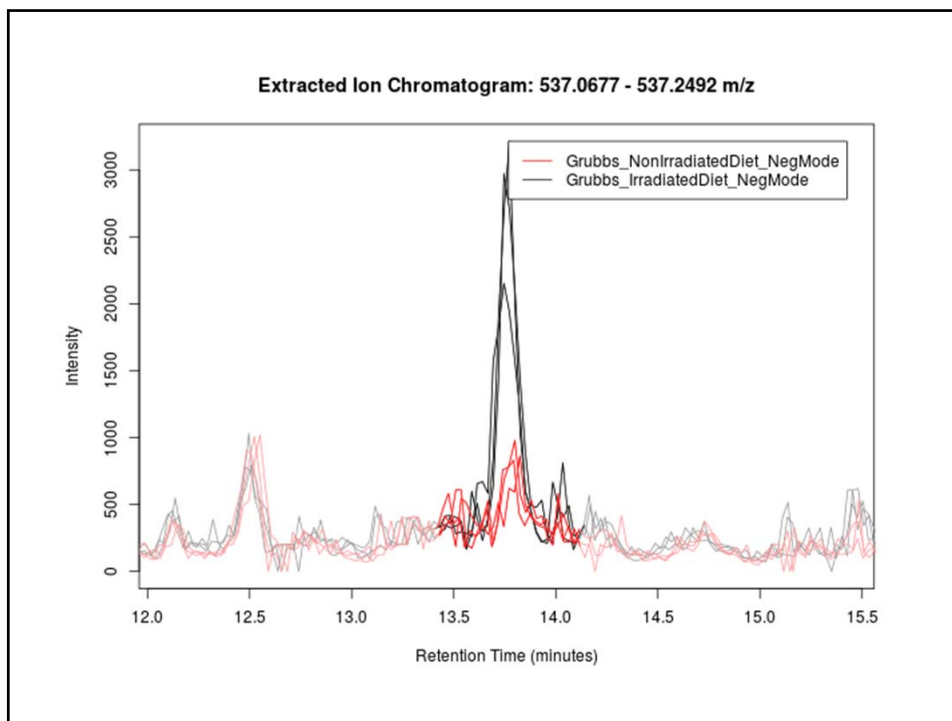

Synopsis

- Opening the .zip file
- Creating the Excel file from result.tsv file
- Why a Volcano plot?
 - Making a volcano plot
 - Selecting ions that reach significance and fold-change cutoffs
- Preparing for MetaboAnalyst

Insert an extra column next to the "log2fold" column

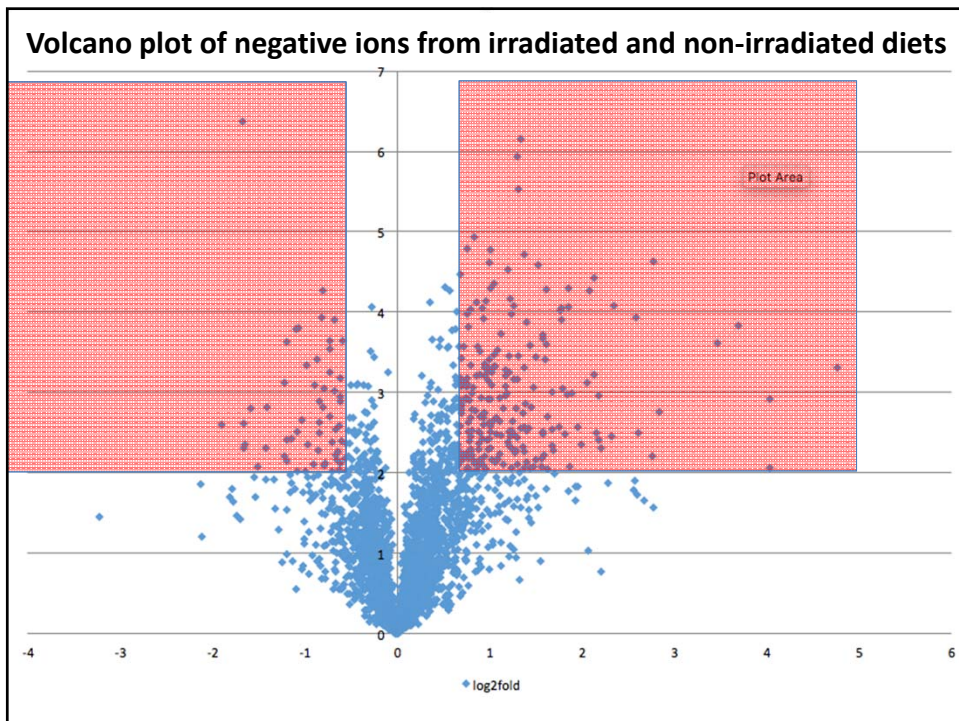

In the first of this column enter " $-\log_2(p)$ " and <return>

Copy this value and paste to all the others in the same column

Highlight columns D and E and create a chart

Selecting cut-offs

- We should now sort the data in the Excel file by p-values (from smallest to largest)
- Copy the metabolite ions that have p-values <0.01 into a new sheet
- Now resort these data by fold-change
 - these can be increased (>1.5) or decreased (<0.667)

Selecting all ions with p < 0.01 and making a new sheet

- Copy the median m/z and median Rt values into a new Excel file. Then copy the column of areas from the first sample in Group_1. Save as an Excel .csv file.
 - Note that the file name must not have spaces – use an underscore instead of a space.
- Leave the file open and replace the yellow column with the areas from the next Group_1 sample. Save as a second .csv file.
- Continue until all Group_1 and Group_2 samples have a corresponding .csv file.

Preparing a .zip file

- Put each of the .csv files for group_1 samples into a folder named “Group_1”.
- Put each of the .csv files for group_2 samples into a folder named “Group_2”.
- Click on Group_1 and Group_2 folders and combine to form a .zip file.
 - Rename the .zip file as [your_name].zip
- You’re now ready to submit it to MetaboAnalyst
- <http://www.metaboanalyst.ca>

News & Updates

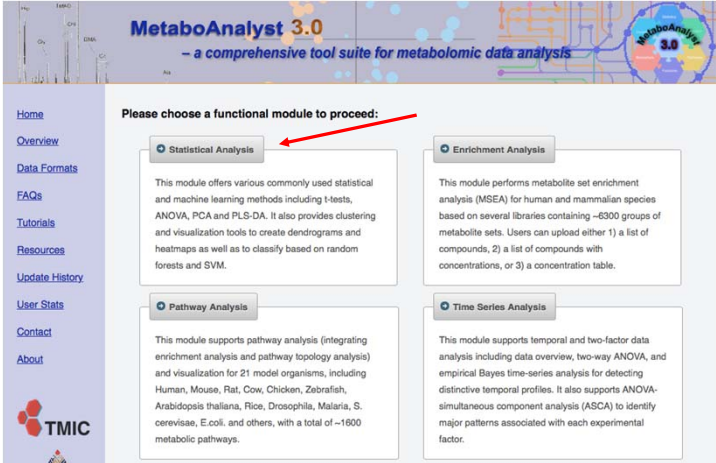

- We are testing our mirror site (mirror.metaboanalyst.ca) on Google Cloud. Traffic will be distributed between the two websites. Let us know if you experience any issue.
- Several feature improvements and bug fixes based on user feedback (10/16/2015). **NEW**
- Added support for logistic regression in ROC Tester (08/12/2015). **NEW**
- Added support for computing compound ratios in biomarker analysis (08/03/2015). **NEW**
- Minor bug fixes and feature enhancements (data IO, PLS-DA, enrichment analysis) to deal with special cases in user inputs (07/20/2015);
- Updated Multivariate Biomarker Analysis module with flexible interface and improved capacity for computing on large datasets (06/05/2015);
- MetaboAnalyst 3.0 paper is now available on the 2015 NAR web server issue [Read more](#)

The image shows the homepage of MetaboAnalyst 3.0. At the top, it says "MetaboAnalyst 3.0 - a comprehensive tool suite for metabolomic data analysis". On the left is a navigation menu with links: Home, Overview, Data Formats, FAQs, Tutorials, Resources, Update History, User Stats, Contact, and About. The main content area is titled "Please choose a functional module to proceed:" and contains four modules: Statistical Analysis, Enrichment Analysis, Pathway Analysis, and Time Series Analysis. A red arrow points to the "Statistical Analysis" module.

MetaboAnalyst 3.0
- a comprehensive tool suite for metabolomic data analysis

Please choose a functional module to proceed:

- Statistical Analysis**
This module offers various commonly used statistical and machine learning methods including t-tests, ANOVA, PCA and PLS-DA. It also provides clustering and visualization tools to create dendrograms and heatmaps as well as to classify based on random forests and SVM.
- Enrichment Analysis**
This module performs metabolite set enrichment analysis (MSEA) for human and mammalian species based on several libraries containing ~6300 groups of metabolite sets. Users can upload either 1) a list of compounds, 2) a list of compounds with concentrations, or 3) a concentration table.
- Pathway Analysis**
This module supports pathway analysis (integrating enrichment analysis and pathway topology analysis) and visualization for 21 model organisms, including Human, Mouse, Rat, Cow, Chicken, Zebrafish, Arabidopsis thaliana, Rice, Drosophila, Malaria, S. cerevisiae, E.coli, and others, with a total of ~1600 metabolic pathways.
- Time Series Analysis**
This module supports temporal and two-factor data analysis including data overview, two-way ANOVA, and empirical Bayes time-series analysis for detecting distinctive temporal profiles. It also supports ANOVA-simultaneous component analysis (ASCA) to identify major patterns associated with each experimental factor.

TMIC

The image shows the "1) Upload your data" section of the MetaboAnalyst 3.0 interface. It is divided into two sections: "Tab-delimited text (.txt) or comma-separated values (.csv) file:" and "Zipped Files (.zip) :". The first section has radio buttons for "Concentrations", "Spectral bins", and "Peak intensity table", a "Format" dropdown menu set to "Samples in rows (unpaired)", and a "Data File" field with a "Choose File" button and "No file chosen" text. The second section has radio buttons for "NMR peak list", "MS peak list", and "MS spectra", a "Data File" field with a "Choose File" button and "Diet_negmode.zip" text, and a "Pair File" field with a "Choose File" button and "No file chosen" text. Red arrows point to the "MS peak list" radio button and the "Diet_negmode.zip" text.

1) Upload your data

Tab-delimited text (.txt) or comma-separated values (.csv) file:

Data Type: Concentrations Spectral bins Peak intensity table

Format: Samples in rows (unpaired)

Data File: Choose File No file chosen

Submit

Zipped Files (.zip) :

Data Type: NMR peak list MS peak list MS spectra

Data File: Choose File Diet_negmode.zip

Pair File: Choose File No file chosen

Submit

Select MS peak list option and then load the .zip file

MetaboAnalyst 3.0
— a comprehensive tool suite for metabolomic data analysis

Processing MS peak list data :

Peaks need to be matched across samples in order to be compared. For two-column format (mass and intensities), peaks are grouped by their m/z values. For three column data (mass, retention time, and intensities), the program will further group peaks based on their retention time. Users need to supply tolerance values in order to proceed. Here are some suggested values: mass tolerance - 0.25 (m/z); retention time - 30 (seconds) for LC-MS peak, and 5 (seconds) for GC-MS peaks. Please note, if a sample has more than one peak in a group, they will be replaced by their sum; some groups will be excluded if none of the classes has at least half its samples represented. Finally, the program create a peak intensity table in which each sample occupies a row and each column represents a peak group identified by the median values of its position (m/z and/or retention time).

Mass tolerance (m/z):

Retention time tolerance:

Retention time tolerance:

MS peak processing information

The uploaded files are peak lists and intensities data.

A total of 6 samples were found.

These samples contain a total of 18522 peaks.
with an average of 3087 peaks per sample

A total of 3087 peak groups were formed.

Peaks of the same group were summed if they are from one sample.

Peaks appear in less than half of samples in each group were ignored.

Data Integrity Check:

1. Checking the class labels - at least three replicates are required in each class.
2. If the samples are paired, the pair labels must conform to the specified format.
3. The data (except class labels) must not contain non-numeric values.
4. The presence of missing values or features with constant values (i.e. all zeros)

Data processing information:

Checking data content ...passed
 The uploaded files are peak lists and intensities data.
 A total of 6 samples were found.
 These samples contain a total of 18522 peaks.
 with an average of 3087 peaks per sample
 2 groups were detected in samples.
 Samples are not paired.
 All data values are numeric.
 A total of 0 (0%) missing values were detected.
 By default, these values will be replaced by a small value.
 Click **Skip** button if you accept the default practice
 Or click **Missing value imputation** to use other methods

Missing value estimation

Skip

Note that XCMSonline filled in peaks

Non-informative variables can be characterized in two groups: variables of very small values - these variables can be detected using mean or median; variables that are near-constant throughout the experiment conditions - these variables can be detected using standard deviation (SD); or the robust estimate such as interquartile range (IQR). The relative standard deviation(RSD = SD/mean) is another useful variance measure independent of the mean. The following empirical rules are applied during data filtering:

- **Less than 250 variables:** 5% will be filtered;
- **Between 250 - 500 variables:** 10% will be filtered;
- **Between 500 - 1000 variables:** 25% will be filtered;
- **Over 1000 variables:** 40% will be filtered;

Please note, in order to reduce the computational burden to the server, the **None** option is only for less than 2000 features. Over that, if you choose None, the IQR filter will still be applied. In addition, the maximum allowed number of variables is 5000. If over 5000 variables were left after filtering, only the top 5000 will be used in the subsequent analysis.

- Interquartile range (IQR)
- Standard deviation (SD)
- Median absolute deviation (MAD)
- Relative standard deviation (RSD = SD/mean)
- Non-parametric relative standard deviation (MAD/median)
- Mean intensity value
- Median intensity value
- None (less than 2000 features)
