Real-time connection of Metabolomics with Medicine and Surgery and the rest of life

Stephen Barnes, PhD
Professor of Pharmacology & Toxicology
Director, Targeted Metabolomics and Proteomics Laboratory

Targeted
Metabolomics &
Proteomics
Laboratory

1

2

Dissociative research

- **Samples are collected and stored for analysis at a “later” time**
- **“Later” can be months or years after sample collection**
 - **Of little direct benefit to the patient**
 - **Although may influence the community of patients**
 - **True of many analyses**

3

Real time analysis

- **Existing, familiar applications**
- **Gases!**
- **The iknife**
 - **GI surgery**
 - **Cancer margins**
 - **Pathology**
- **DESI**
- **CARS**

4

Real-time analysis

- We see the real-time use of MS when we go through security checks at the airport

- Checks for ion signatures of explosives

- Other devices are used to check for specific volatiles in the breath

5

Noses and smell – real time analysis

The superior volatile metabolite detector

6

Gases produced in the GI tract

- H_2 , CO_2 and CH_4 from carbohydrates
 - *Firmicutes*
 - From pyruvate and NAD(P)H/FADH₂
 - H_2 used by sulfate-reducing bacteria (SRBs), methanogenic Archaea, and acetogens
- SRBs produce H_2S
- NO from nitrates

7

Methods for measuring gases

Technology	Operation mode	Target intestinal gas	Detection limit	Cross-sensitivity	Response time	Life time	Estimated cost
<i>Spectrometry based^a</i>							
GC-MS	Off line	All gases	ppt to ppb	Low	~Several minutes	Long	>US\$300k
IMS	Real time	All gases	ppb	Low	<1 min	Long	>US\$100k
PTR-MS	Real time	All gases	ppt	Low	<1 min	Long	>US\$400k
SIFT-MS	Real time	All gases	ppb	Low	<1 min	Long	>US\$400k
LS	Real time	Most gases except H_2	ppt to ppb	Low	<1 min	Long	<US\$50k
<i>Sensor based^b</i>							
Electrochemical	Real time	H_2 , H_2S , NO, and CO_2	ppm	Medium	<30 s	Short	<US\$100
Calorimetric	Real time	H_2 , CH_4 , and CO_2	ppt	High	<10 s	Medium	<US\$100
NDIR	Real time	CO_2 , CH_4 , and VOCs	ppm to ppt	Low	<20 s	Long	<US\$300

GC-MS gas chromatography-mass spectrometry
 IMS ion mobility mass spectrometry
 PTR-MS proton transfer reaction mass spectrometry
 SIFT-MS selection ion flow tube-mass spectrometry
 LS laser spectrometry

Jian Zhen Ou et al., Trends Biotech, 2015

8

Device for measuring fecal gas production

Jian Zhen Ou et al., Trends Biotech, 2015

9

Fecal gas production (ex vivo)

10

Real-time *in situ* monitoring gas production

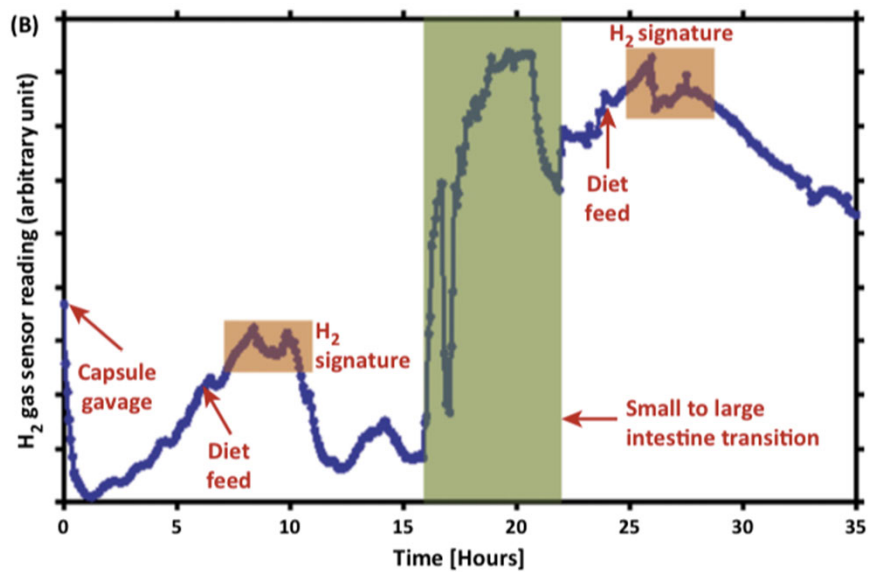

- The device is swallowed
- Completes full mouth-to-anus transit, reporting data as it goes
- Also provides positional information
- Operates at 405, 433, and 915 MHz
- Uses Lithium batteries!!

Jian Zhen Ou et al., Trends Biotech, 2015

11

Real time intestinal gas production

Jian Zhen Ou et al., Trends Biotech, 2015

12

The Challenge for Mass Spec

How to get the mammoth into the gas phase for analysis?

13

Droplet principle of electrospray

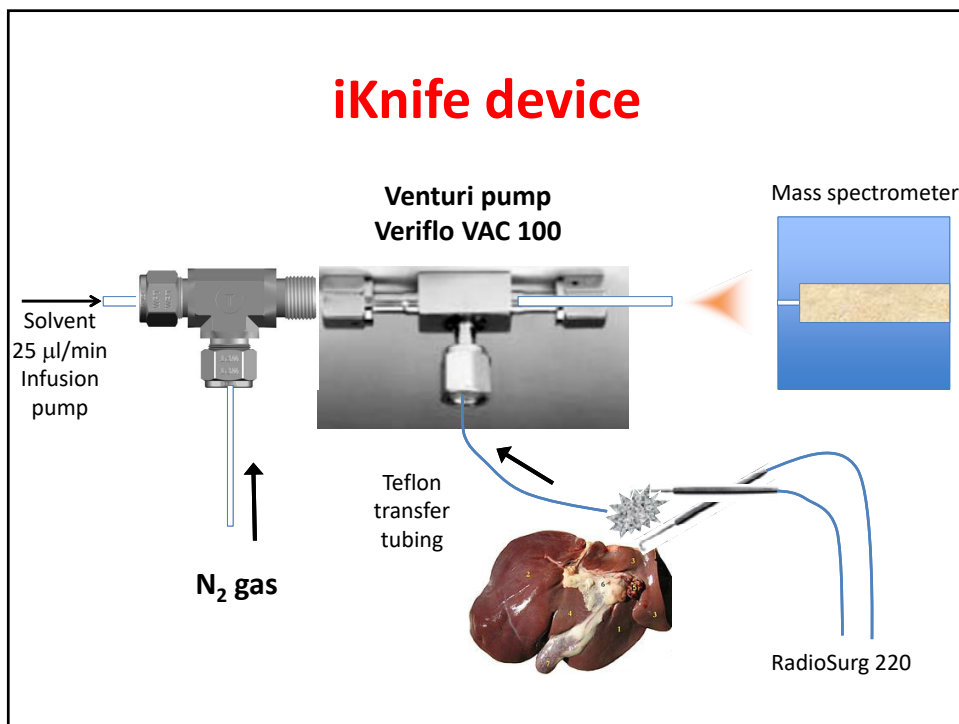

Droplet spray

- Sneeze
- Lung motion
- Surgical knife
- Other vapors

14

15

16

Phospholipid patterns are characteristic of cells and tissues

- Single items are not sufficient as biomarkers
- The classes of phospholipids and their fatty acid composition contain pattern discriminators
- In the absence of known classifiers, principal components analysis looks for groups of components that have the larger sources of variation
 - An individual sample's contributions to these groups are plotted in a 2D or 3D manner

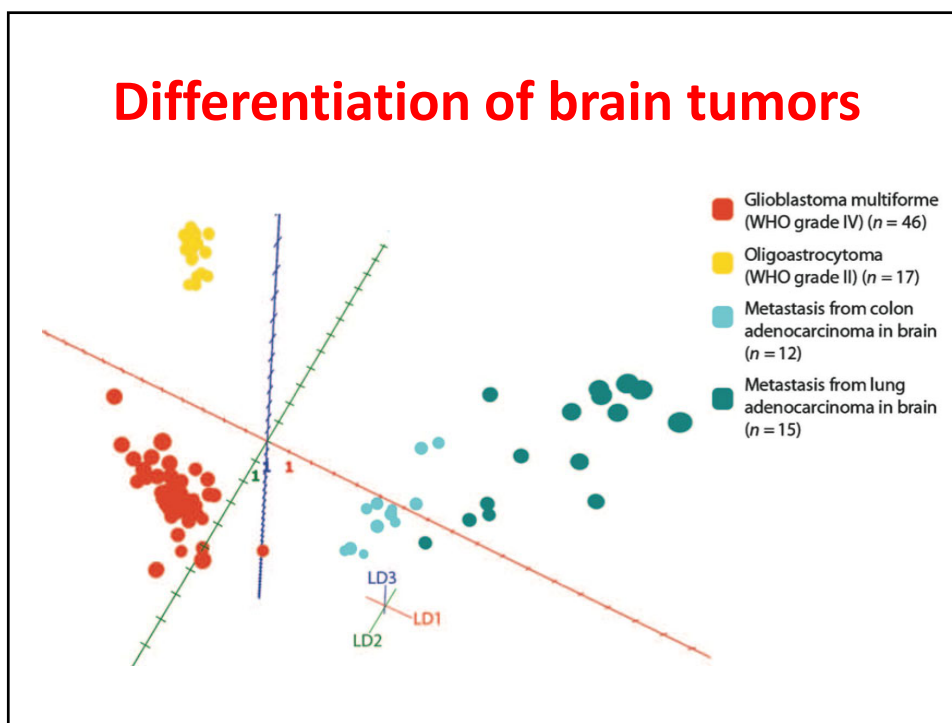

17

Principal components analysis of ions from surgical "smoke"

18

Differentiation of brain tumors

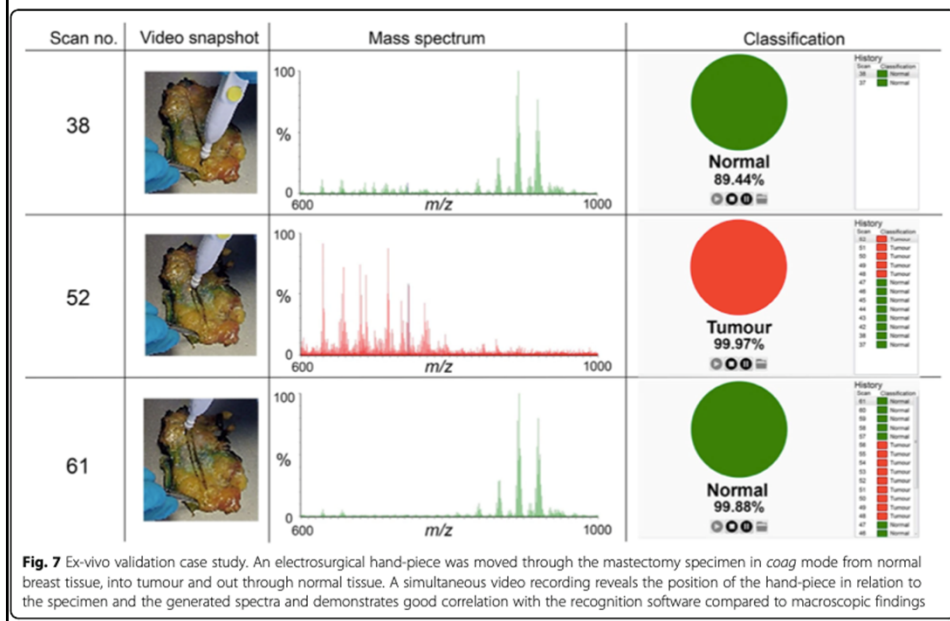

19

Changing lipids across cancer margin

20

Adding real-time imaging – breast cancer

21

Computer-driven, Rapid Evaporative Imaging MS (REIMS) for tissue sections

22

Examining tissue (slices) by REIMS

Golf et al., Anal Chem 2015

23

Modes of data acquisition for REIMS

Line Scans:
Cutting Mode

Individual Pixels:
Pointing Mode

Golf et al., Anal Chem 2015

27

Desorption electrospray ionization (DESI)

- Works by directing an electrical fine spray at a tissue target – does not require deposition of a matrix

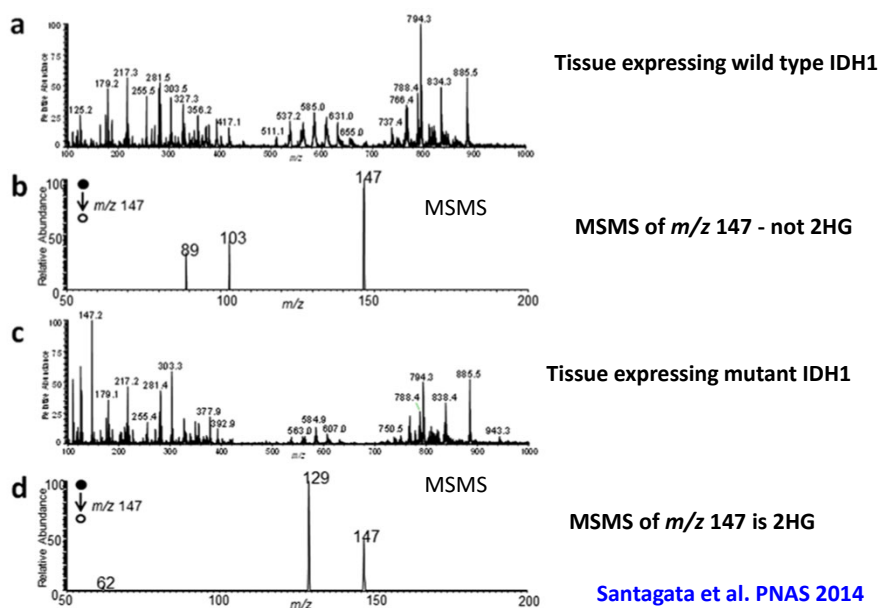

28

The IDH story of brain and other tumors

- IDH1 (isocitrate dehydrogenase) is mutated in position 132 in a GWAS study of patients with glioblastomas
- IDH1 catalyzes the conversion of isocitrate to alpha-ketoglutarate (α KG) which is a two-step reaction
- Mutant IDH1 catalyzes the first step – to 2-hydroxyglutarate (2HG), but not the second one to α KG
- 2HG is considered to be an onco-metabolite
- What follows is a study from a group at Harvard – performed in the [Advanced Multimodality Image Guided Operating Suite at Brigham and Women's Hospital](#)

29

Whither 2-hydroxyglutarate?

30

Value of exact mass – “147” vs “147”

31

Tumor xenograft imaging and 2HG

The ion at *m/z* 146.9 was subjected to MSMS to measure 2HG

Santagata et al. PNAS 2014

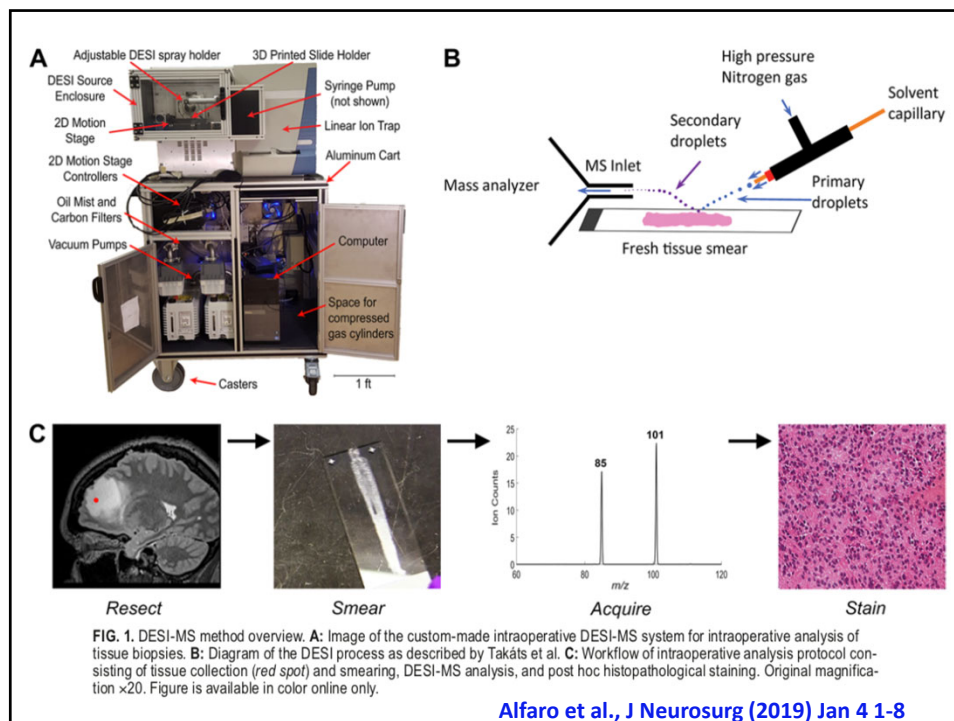

32

Application to human glioblastoma

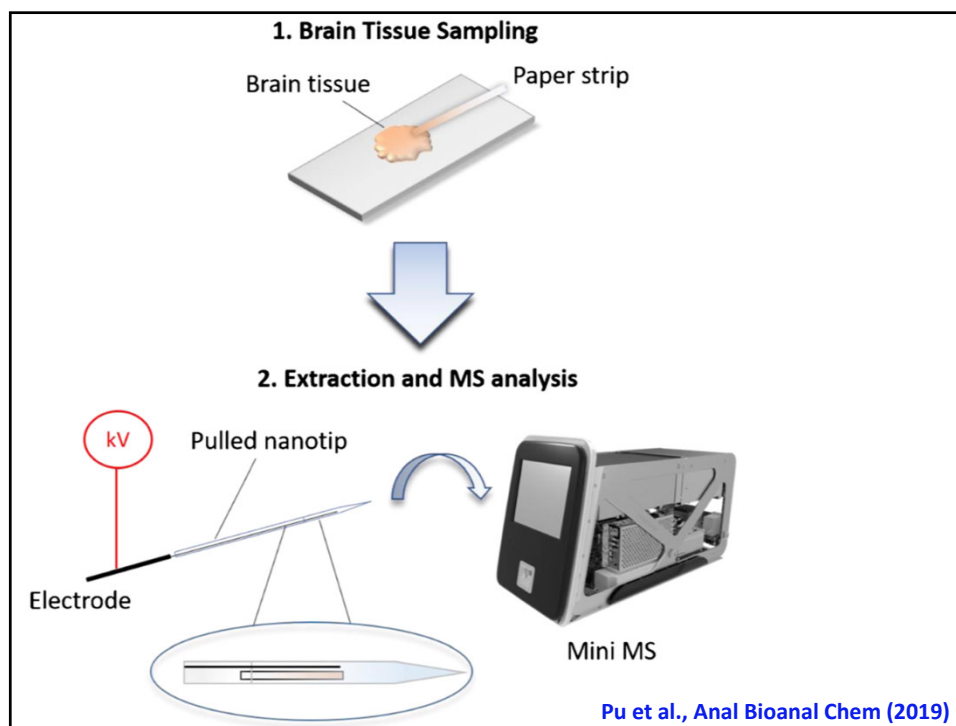

Santagata et al. PNAS 2014

42

43

Use of Raman spectroscopy Real-time imaging of metabolites in skin

- <http://harvard.sunneyxielab.org/research/carstechniques.htm>

Sunny Xie, PhD - Harvard

44

Where to next?

IR kidney injury
824.7m/z [M+Na*]
MALDI-Imaging of a phospholipid
Janusz Kabarowski/Kelly Walters

Multiple sampling single cells – Nemes group

CARS imaging of a cancer cell – spectroscopic, real time Raman imaging

OR, two people with disparate abilities and insights will create something we've never heard of (yet)

45

What might it be?

Nanoprobe inserted into the wall of a cell recording changes in metabolism in real time – sub nl sampling/analysis

TOMORROW?

Measuring O₂ uptake using a Warburg apparatus – 10 ml incubations

YESTERDAY

The O₂ and pH probes of a Seahorse™ apparatus – 7 μl incubations

TODAY
