6-2612

1

Data acquisition in mass spectrometry-

1. Data Dependent Acquisition (DDA)
2. Data Independent Acquisition (DIA)

MSMS^{ALL}- No stone unturned

Data-independent workflow with a capability of acquiring high resolution MS/MS data for all detectable ions (m/z 200-1200) in a single run (6 min)

SWATH-MS
(Sequential Window Acquisition of all Theoretical-Mass Spectra
(in Triple-TOF system)

Simons et al. Metabolites, 2012

2

Strength of MS/MS^{ALL}

- Comprehensive, no requirement of *a priori* assumptions
- Combination of top-down and bottom-up methods
- Digital records of MS and MS/MS (high mass resolution)
- Data can be searched retrospectively
- Comparison (statistical) lipid changes between/among groups

Prasain et al. Metabolites, 2015

3

High speed, high resolution, sensitive detection and accuracy are crucial for lipid analysis

Sciex 5600 Triple-TOF

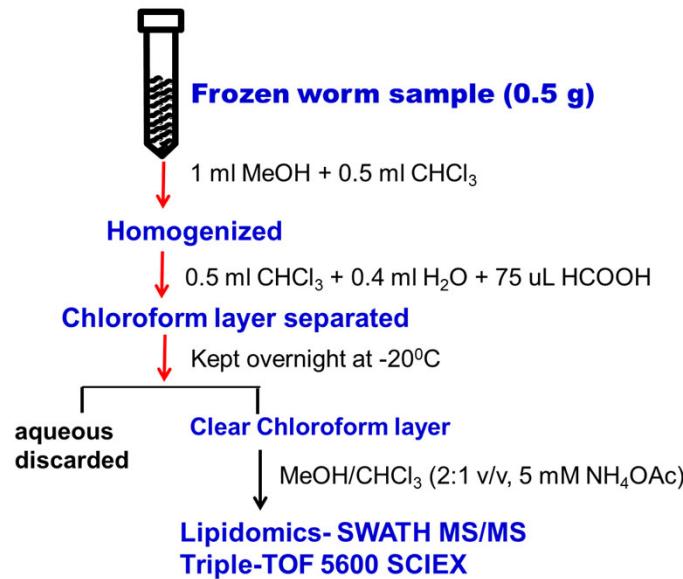

- Over 30,000 mass resolution
- <5 ppm mass accuracy
- Very fast acquisition of MSMS spectra (10 ms)
- Precursor and neutral loss analyses are possible performed *post hoc*

AB Sciex Triple TOF 5600

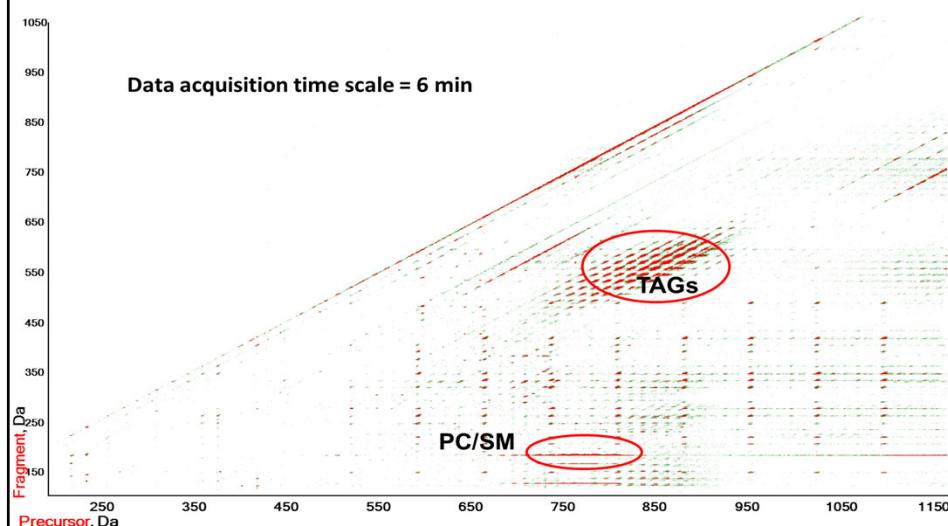

4

Extraction of lipids and analysis

5

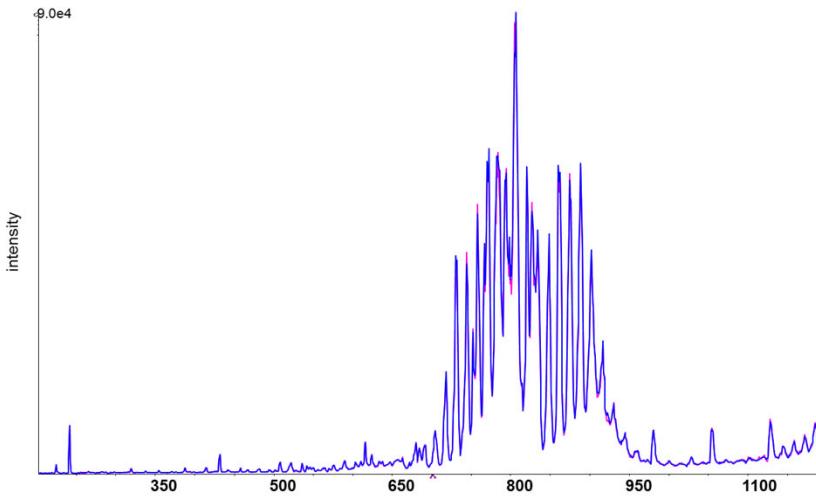

Snapshot of lipidome composition of *C. elegans* by Triple-TOF MS(+ve ion mode)

Prasain et al., Metabolites, 2015

6

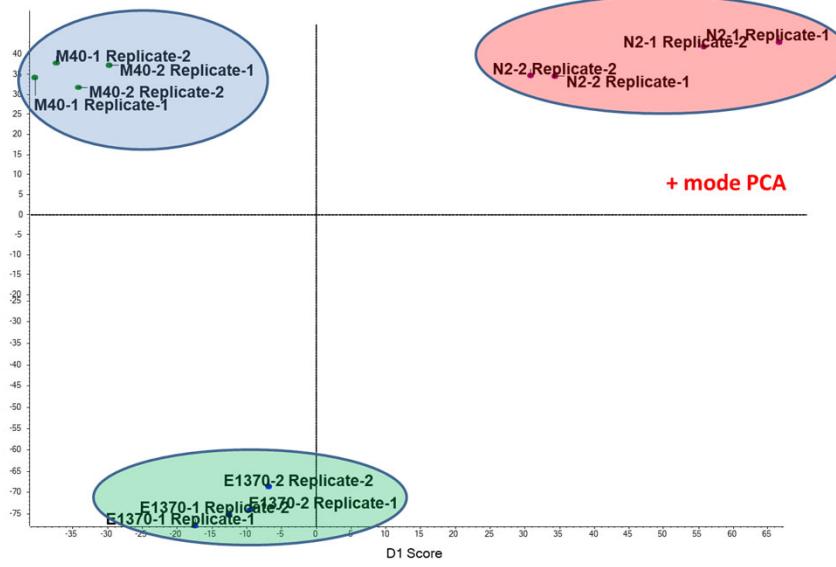

Reproducibility of two replicates of wild type worm extracts in terms of TIC

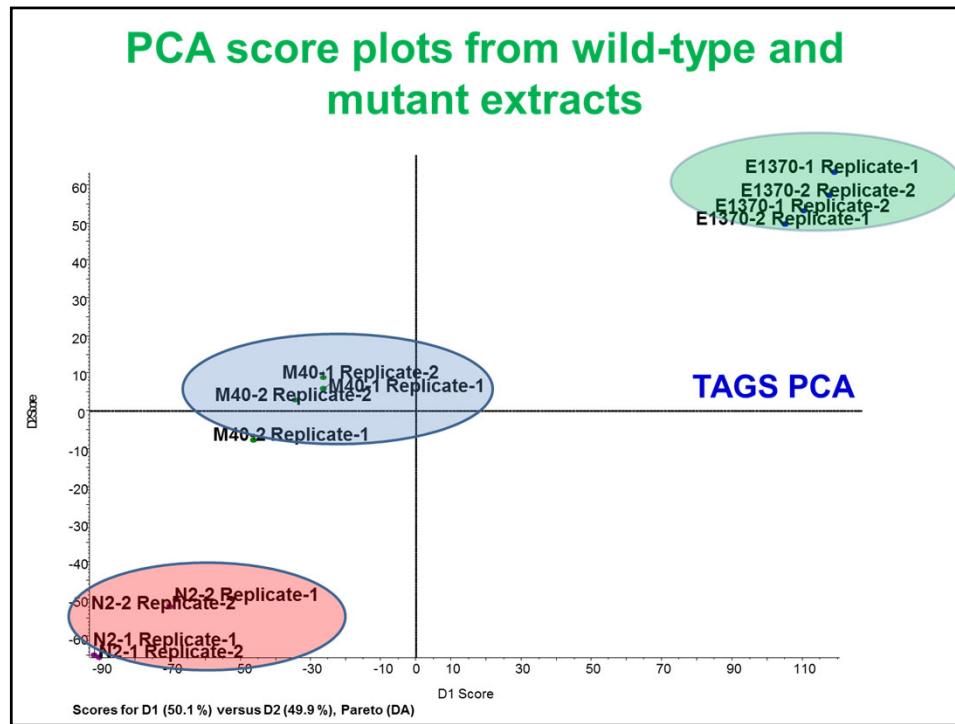

Prasain et al. Metabolites, 2015

7

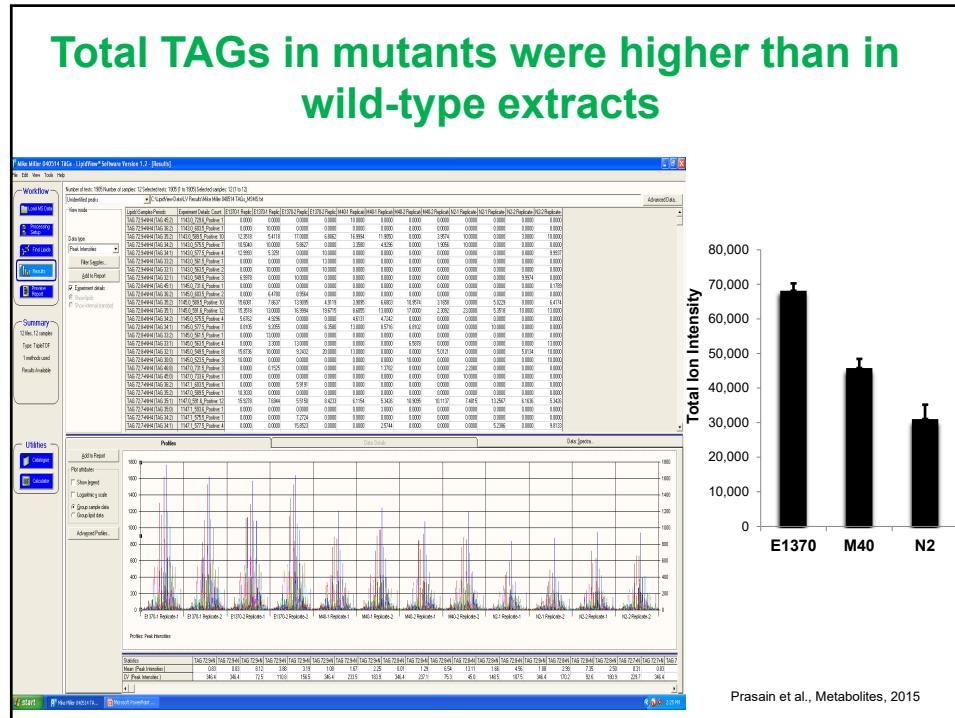

Good separation of groups and reproducibility within groups

8

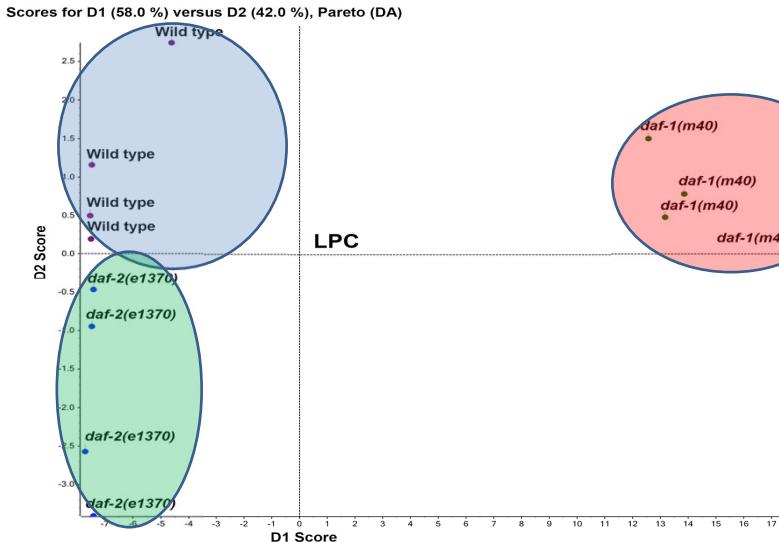

9

10

**PCA score plot of LPCs from wild-type and mutant extracts;
Daf-1 mutants are significantly different**

11

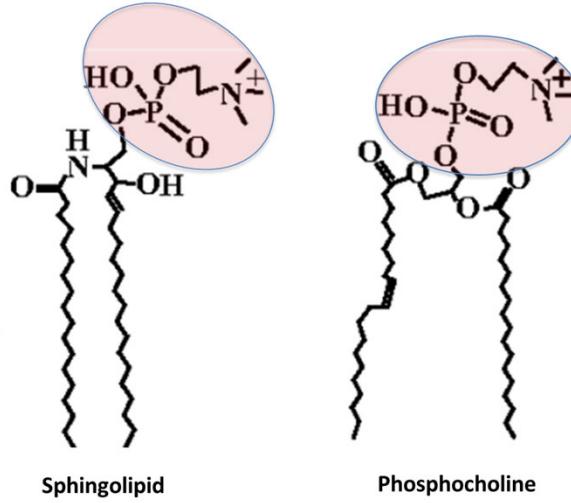

MS/MS^{ALL} limitations

- Poor selectivity
- MS/MS fragment ions may contain fragment ions from other precursor ions such as isobaric species to precursor ion of interest
- Limited to infusion or flow injection acquisition

12

The problem of analyzing lipids

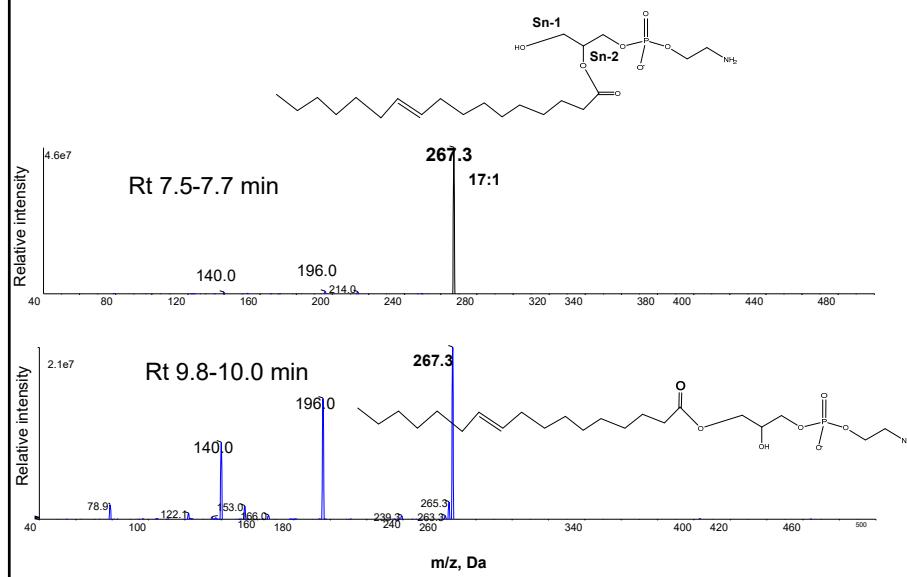

- Despite the sheer number of lipids, the *units* comprising them are closely related and therefore they have similar masses
- Sphingolipids may only be different in mass by 1 Da from their PC analog
 - ^{13}C -Isotope profiles overlap
 - Head groups are the same

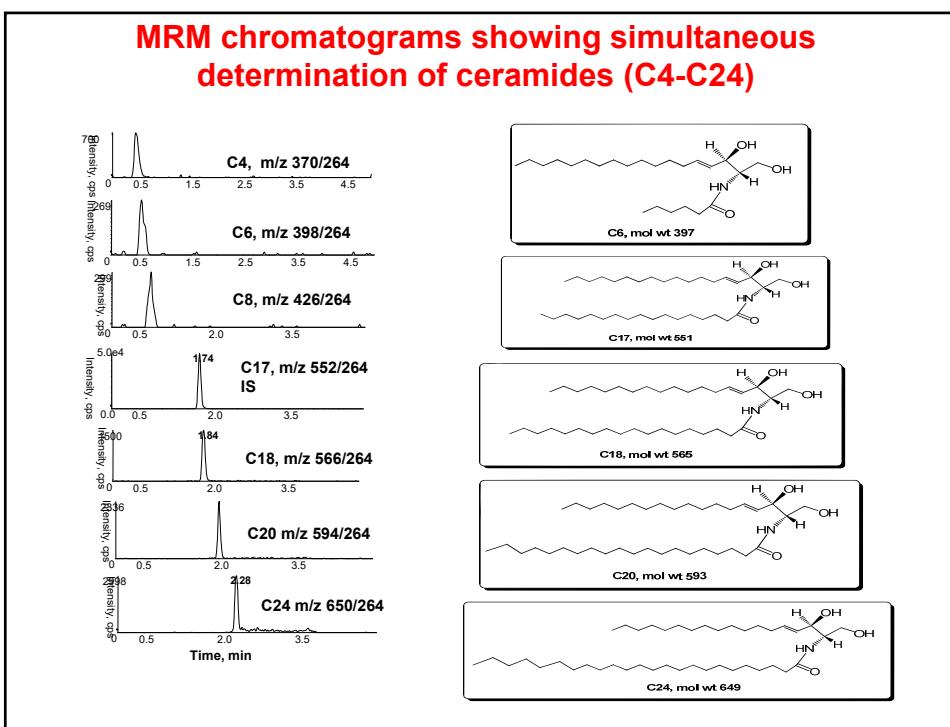

Overlap may exist between C12 and C13 monoisotopic peaks of PC and SM

13

Regioisomeric LPEs m/z 464, separated by LC-MS/MS

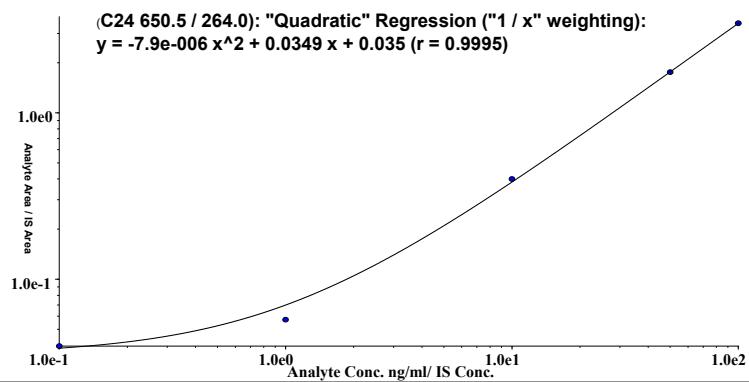

15

A linear response for Cer C24:0 was observed over a range of 0.1-100 ng/ml with correlation coefficient greater than 0.99

Sample Name	Analyte Peak Name	Calculated Concentration (ng/mL)	Accuracy (%)
Ceramide Standard 100 ng/ml	C24 650.5 / 264.0	100	100
Ceramide Standard 50 ng/ml	C24 650.5 / 264.0	49.8	99.6
Ceramide Standard 10 ng/ml	C24 650.5 / 264.0	10.5	105
Ceramide Standard 1 ng/ml	C24 650.5 / 264.0	0.634	63.4
Ceramide Standard 0.1 ng/ml	C24 650.5 / 264.0	0.132	132

16

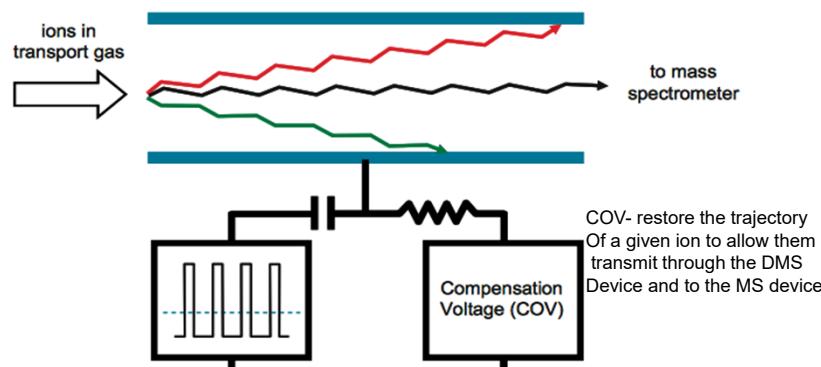

Differential mobility mass spectrometry

- When a fragment ion may have multiple precursor ions, the precursor ions may be separable by DMS before they enter the mass spectrometer
- By scanning with the compensating voltage (CoV), the precursor ions enter the mass spectrometer at different CoVs
- (Note: Further separation is possible using resolving agents, e.g., isopropanol)

17

Differential mobility MS is an answer

Innovative Planar Design; SelexION™ Ion Mobility Cell.

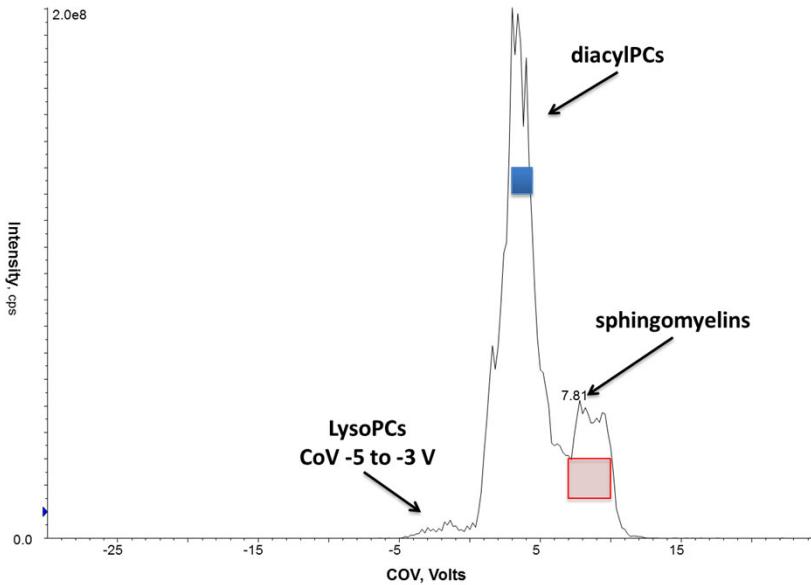

Separation waveform (SV)
Displaces ions from the one or other electrodes
Depending upon high/low field mobility characters

AB SCIEX

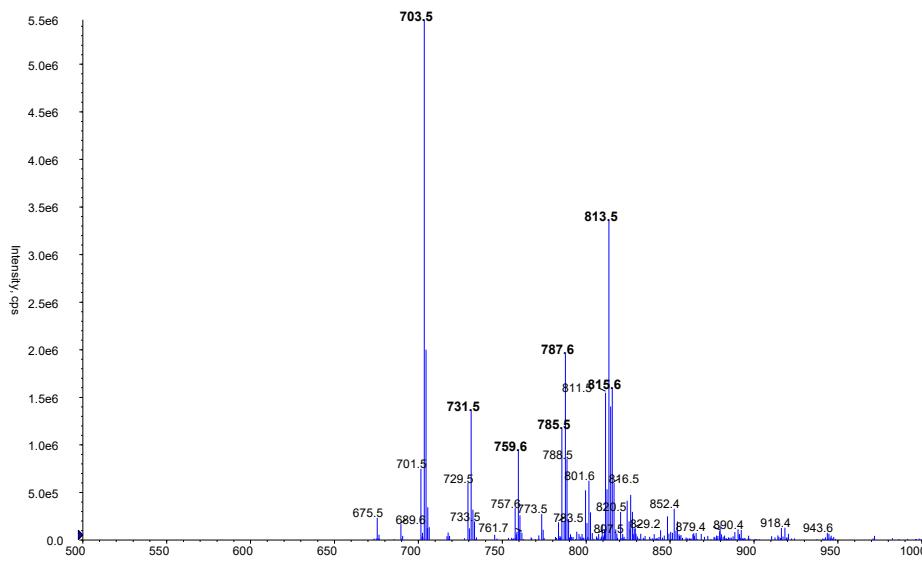

18

Total ion current of precursors of m/z 184.0 Using Selexion

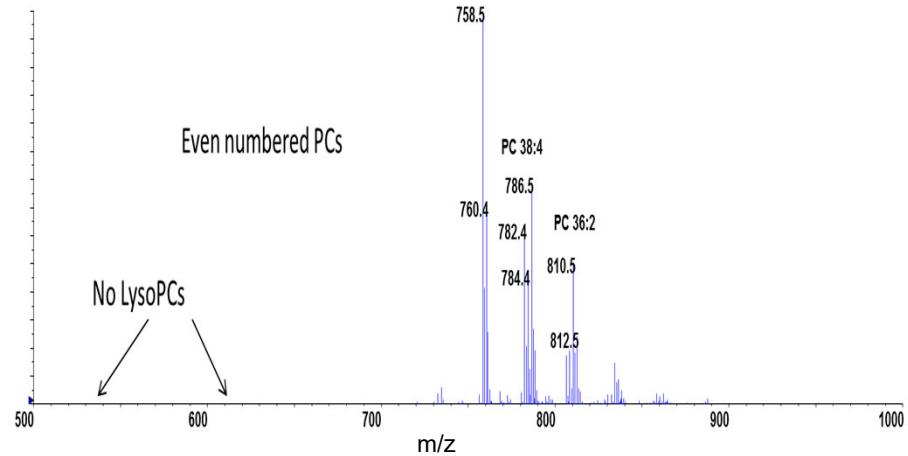

19

Precursors of m/z 184.0 (CoV from 7.8 to 10.0 V) Sphingomyelins are well separated from PCs

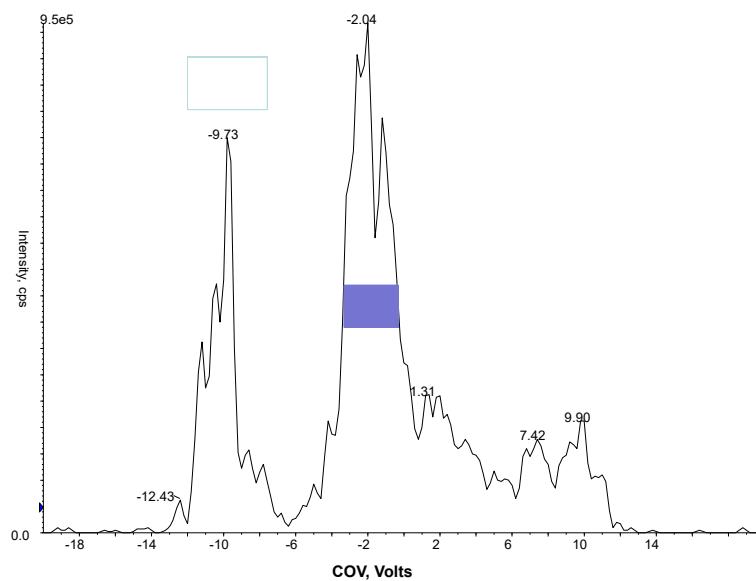

20

Precursors of m/z 184.0 (CoV from 3.0 to 3.6 V)

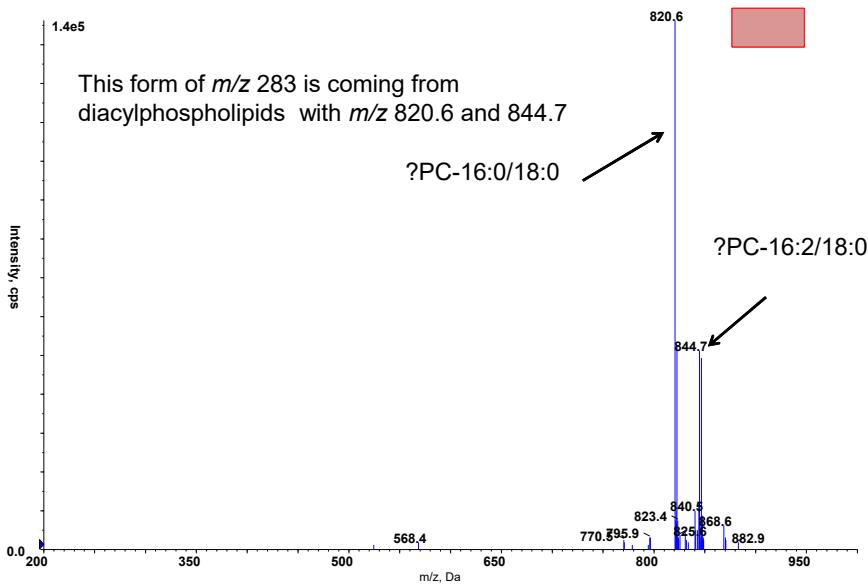

21

TIC of Precursors of m/z 283.0 (18:0) Separation of lipids with FA 283 in negative ion mode

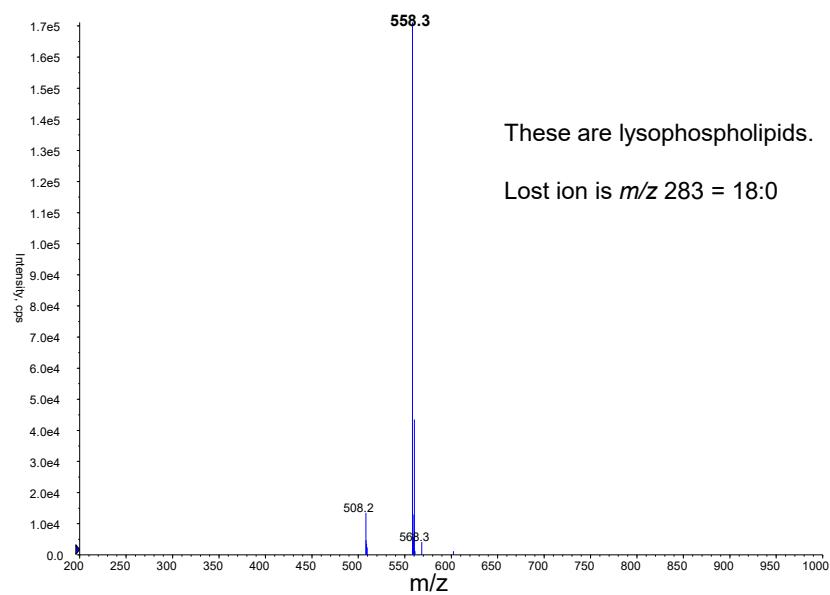

22

Precursors of m/z 283.0 CoV from -3.4 to -0.4 Volts

23

Precursors of m/z 283.0 – CoV from -11.8 to -8.6 V

24

Conclusions

- Shotgun lipidomics approaches are high throughput and applicable to perform profiling as well as quantitative analysis of various lipids in biological samples.
- Differential ion mobility is useful for reducing or separating isobaric interferences
- LC-MS/MS method operating in multiple reaction ion monitoring mode (MRM) can be used for identification and simultaneous quantification of lipids.
